In contact with dampness product separates a small quantity of n-butylamine (109-73-9) which irritates skin, mucous membranes and respiratory system.

**SECTION 12: Ecological information****12.1 Toxicity****Assessment:**

For the product as a whole, no test data is available. D4 is an unavoidable contamination in the manufacture of silicone polymers and leads to adverse effects on aquatic organisms under laboratory conditions. The release of D4 from a polysiloxane matrix is limited thermodynamically by the partition equilibrium silicone/water. Thus, only that portion of the D4 content that gets into the aqueous phase contributes to the environmental hazard of the overall product. For the classification according to the summation method this is being considered applying correction factors.
